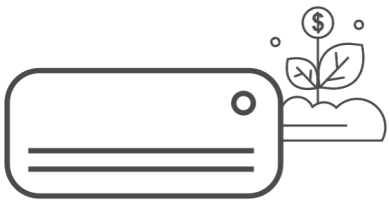
Clean Heat



Ditch Your Inefficient Fossil Fuel System and Switch to an Efficient Heat Pump!

DVM Industries specializes in providing heat pump retrofit solutions to fit your comfort, financial, and sustainability needs, without the use of fossil fuels.

Heat pumps are a smarter and more efficient way to keep your place comfortable. They use refrigeration technology and electricity to provide heating and cooling for your facility

Heating and cooling accounts for the majority of buildings' greenhouse gas emissions and NYC passed NYC Local Law 97 of 2019 to address these emissions to reach carbon neutrality by 2050.

It's time to switch to a cleaner future!

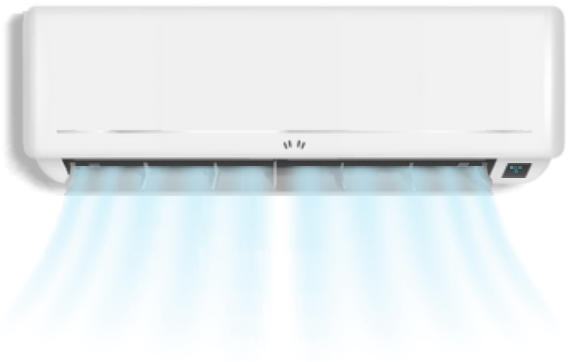
Strategic Partner:

Improve Thermal Comfort!

DVM Industries provides turnkey heat pump retrofit solutions to fit your comfort, financial, and sustainability needs, and significantly reduce carbon footprint and NYC Local Law 97 annual penalties. We have experienced with various heat pump technologies on the market and installation methods to provide the best solutions for you.

We provide a detailed financial assessment for various heat pump options. We are experienced with local and state incentive programs and take advantage of these incentives to maximize your ROI.

Save energy and reduce carbon footprint!



We Offer

Consultation

- DVM's experienced engineers provide practical and technical heat pump retro t solutions. We have experience with various heat pump technologies and installation methods.

Maintenance

- We provide preventive maintenance and repairs to protect your heat pump assets.

Financial Assessment

- We provide a detailed nancial assessment for various heat pump options with available rebates or incentives. We have experience with local and state incentive programs to maximize your ROI.

Supply & Installation

- We provide a "one-stop-shop" process and quality control.

Incentives Management

An important goal of energy efficiency policies and programs to help minimize these upfront project costs, so owners are encouraged to invest in energy reduction improvements.

DVM will help clients navigate through incentive process. We identify and quantify the most suitable programs for our clients by negotiating with the utilities, filling out applications, arranging all pre and post inspections needed and getting rebate approvals.
