Energy Audits

Saving Opportunities

DVM Industries will analyze the energy use in a building with the purpose of identifying opportunities to decrease the amount of energy consumed without negatively affecting the operations

An energy audit identifies cost-effective improvements that will result in energy savings. Those energy savings through high-performance design and use of energy-efficient technologies can reduce energy costs in commercial buildings by up to 50% every year

Energy Audit Approach

DVM Industries addresses all energy related building systems including:

- Lighting
- Building Envelope
- Building Structure
- Cooling & Heating Systems
- Ventilation & Air Distribution
- Motors, Fans & Pump Systems

Energy Investment Strategies for Commercial Buildings

- ✓ Increase the efficiency of technology and equipment.
- ✓ Improve the design and efficiency of the overall building system.
- ✓ Introduce energy management and controls.
- ✓ Introduce efficiencies in building maintenance.
