DVM INDUSTRIES

LED Lighting

Bring brightness and more savings to your Facilities!

DVM industries provides turnkey LED lighting services including the audit/survey, controls configuration, installation, engineering and design, project management and rebate management. With our team of experts, we evaluate the facility at no cost to the client and provide recommendations to optimize savings while maintaining or improving light levels. We provide a full ROI and Simple Payback analysis reports to the client, as well as any available rebates and a 10 year cash flow analysis

In a facility, lighting is the first place to look for energy savings, since it represents an average of 40% if a building's energy saving consumption. By upgrading old lighting technology to LED and using your lighting more efficiently, you can significantly reduce energy costs.

Whether you know exactly what you want for your property or you're not quite sure yet, we can help!

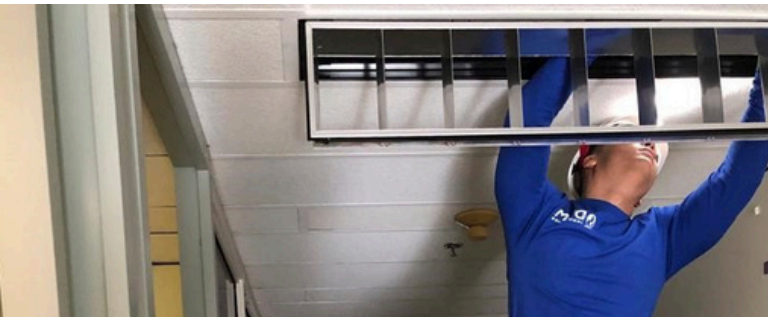
Strategic Partner: I·E·S·G Integrity Energy Solutions Group

It's time to convert to LED!

DVM industries work closely with you to determine your exact needs and goals prior to commencing any project. Wether it is installing new fixtures or retrofitting your building we offer you a Value Engineering approach to adjust to your budget, savings and designs needs.



Energy savings from lighting retrofits (replacing components in the lighting system with counterparts that will make energy use more efficient) and lighting upgrades (any strategy that reduces the system's energy use) are realized over time that can be significant enough to not only pay for the new equipment, but produce a return on the invesment.

By taking full advantage of efficient lighting and the various rebates and incentive programs associated with it, DVN Industries' customers benefit from the highest return on investment with the fastest payback period in the industry.

We provide

Consultation

DVM's team of electricians and engineers will recommend technical solutions to provide energy savings and comfort for your tenants.

Value Engineering

Our tem will cross-match your lighting speci cations with alternative xtures that meet your budget, design goals and schedules.

Supply & Installation

We order, deliver and install your new lighting system without disrupting your daily operation, and dispose of the old xtures.

Financial Asssesment

We provide a full ROI analysis report to the client including any available rebate or incentive and a 10 year cash ow analysis.

Lighting Controls

It is important to mention that adding lighting controls will enhance energy savings and allow you to comply with local laws, yield higher savings and qualify for higher incentives. Lighting control system provide in-lighting energy cost control and energy efficiency by involving communication between the lighting equipment and a central control system that can be adjusted.

Some of the Lighting controls we manage are: Occupancy Sensors, Dimmers, Daylight Harvesting, Daylight Dimming and Timers.
