DVM INDUSTRIES

Energy Solutions

NYC Local Laws

Building construction an use substantially impact human health and the environment. Commercial and residential buildings are responsible for two-thirds of greenhouse gas emissions in NYC.

Local laws are designed to reduce GHG emissions, bring transparency to energy usage and inform building owners on how to make their buildings more efficient.

DVM Industries Can Help You To...

- Stay up to code with local laws
- Reduce your carbon footprint
- Improve your indoor air quality
- Avoid any penalties
- Decrease energy costs

Our Services

- LED Lighting Upgrade
- EC Motor Upgrade
- HVAC Upgrade
- Rebate Management
- EV Charging Stations

DVM will determine the 2024 and 2030 carbon emissions limits for your building type, establish existing building conditions and develop preliminary recommendations for potential energy upgrades and GHG reduction strategies that will limit that exposure and help your building meet these goals.

DOES IT AFFECT YOUR BUILDING?

The first deadline to meet emissions limits is in 2024, and the next is in 2030. Most buildings will need to make upgrades to comply with the 2030 limits to reduce health and environmental impacts.

Local Laws

- LL85: Energy Conservation Guide
- LL87: Energy Audits & Retro-Commissioning
- LL88: Lighting Upgrades & Sub-metering
- LL97: Carbon Emission Limits
