Sustainable
Energy Solutions
for a Changing World

# A *Holistic* Approach

By analyzing various risks—market, regulatory, carbon, and contracting—we customize energy strategies to meet your organization's needs. Our toolbox includes deployment of distributed energy resources (DERs), resiliency programs, energy procurement, and efficiency measures. We leverage these tools to create sustainability strategies that allow you to achieve your goals.

## Our Services

### PROCUREMENT

Energy is a financial market and the key to driving value is financial analysis. Our proprietary procurement best practices have successfully guided many of the nation's largest energy buyers through both good and bad markets for more than two decades. We employ these practices to help our clients lower energy costs, mitigate market risk, and reduce carbon emissions.

### COMPLIANCE

We'll help you navigate the complexities of ever-changing local, state, and national regulations and codes, so you can stay compliant while minimizing costs.

### EFFICIENCY

Integrated energy efficiency strategies are our specialty. We'll show you the most cost-effective ways to maintain healthy working environments and reduce energy costs.

### RESILIENCY

Power failure can be catastrophic in the built environment, and in some cases it can be a matter of life and death. Our industry-recognized resiliency best practices are the foundation for designing and financing clean, on-site power generation that minimizes consequences of a prolonged power outage and drives down costs.

### SUSTAINABILITY

To stay competitive, sustainability goals need to be at the of top your management agenda. We'll work with you to plan and achieve energy efficiency, carbon reduction, and ESG compliance for your organization.
